

Skyesoft Codex Meta

Skyesoft™ Information Sheet

October 5, 2025, 7:47 AM MST – Created by Steve Skye

Description

The codexMeta object defines the structural and behavioral rules governing all Skyesoft modules. It dictates how each codex entry is composed, validated, and enriched by AI logic.

Purpose

Defines how the Skyesoft Codex is structured, validated, and interpreted by the Skyesoft Report Kernel and Skyebot framework.

Implementation Notes

This meta-layer allows Skyebot and the PDF generator to self-validate new modules. The codexMeta entry itself enforces consistency between human authorship and AI enrichment, ensuring predictable, controlled output.
